Hello,

Another question:

I would like to set up all the dutch mails as spam-free. Can I do this?

If I set the parameter `ok_languages` to 'nl', does it mean all the other languages will be blocked? (I hope it doesn't, because a lot of languages are used in our company)

So, I would like dutch messages to pass the spamfilter without further checking and other languages to be checked normally.

Can someone help me?

Thanks,

An

From the documentation

(http://spamassassin.apache.org/full/3.0.x/dist/doc/Mail_SpamAssassin_Conf.html) it appears to be so.

Setting "`ok_languages`" to "nl" cause points to be added to the score for e-mails from non "nl" senders (if it can detect the language).

You might be able to accomplish what you want by increasing the number of points before an item is considered "spam" go from 5 to 7.8, and enabling the filter. This would result in mail from "nl" with lower scores and more likely to make it through the filter.

From \sa\rules\50_scores.cf

```
# ok_languages and ok_locales  
score BODY_8BITS 1.500  
score CHARSET_FARAWAY 3.200  
score CHARSET_FARAWAY_HEADER 3.200  
score HTML_CHARSET_FARAWAY 0.500  
score MIME_CHARSET_FARAWAY 2.450  
score UNWANTED_LANGUAGE_BODY 2.800
```
