Hi there,

I have had to reinstall the nospamtoday server on new hardware, and now I am seeing a lot of non-spam emails being flagged with 5.4 BAYES_99 , which is then tagging it as SPAM. It seems that almost every email that comes through is getting this 5.4 BAYES_99 tag, even things like PayPal confirmation plain text emails.

I am using the latest version of nospamtoday. We dont use any SA learning.

Is there anything I can do?

Many thanks

Either turn off Bayes completely (set use_bayes 0 in the sa\ruleset\local.cf file), or learn one of the paypal confirmation messages as ham.

Instructions for learning spam or ham messages can be found in the manual, or here:
