Subject: Forced delete of "Bad" SPAMs

Hi there,

We currently have NST setup to still send eMails to customers with an amended subject line - this is great for us, as we still haven't cracked the learning issue as mentioned earlier in the forum (pretty close now!) ....

My question though - all SPAM eMails are delivered to customers, regardless of their "severity" ...

Ideally, we want to delete SPAMs that have been flagged SPAM based on certain rule names (such as SPAMCOP\_URI\_RBL, OB\_URI\_RBL, WS\_URI\_RBL) but still deliver, for now, all other SPAM mails.

Is there a way to do this?

Many thanks!

NoSpamToday! SMTP Proxy Version 2.0 will provide a separate threshold setting to delete or quarantine spam mails instead of tagging and delivering them.

By assigning appropriate scores to the rules you mentioned you will then be able to delete spam mails instead of delivering them.
