Hi,

I use Imail Server as Mail Server and collect all spams that are not recognised as spam's in a folder. The format of this folder basically is a flat file containing all the mails.

What's the best way to get spamassassin to learn from such a flat file?

Cheers

Is the file in mbox format ? If this is the case, run:

```
cd [NoSpamTodayInstallationPath]
```

```
sa\sas-learn -c sa\ruleset --spam --mbox "[FolderPath]"
```

Otherwise:

```
cd [NoSpamTodayInstallationPath]
```

```
sa\sas-learn -c sa\ruleset --spam "MessageFile"
```

Please see also the corresponding HOWTO document on our website:
