Hi,

I've just updated noSpamToday, looks nice.. but after the update all the mails i had in the blacklist are gone ? they can't be found in the SpamAssassin filter, can I somehow downgrade to the old version and the copy those email to the new blacklist filter ?

Or is there a settings file where all these mails are listed ?

Any help is greatly appreciated, thanks.

Looking forward to hear from you.

Best regards
Raz

In version 2, whitelist/blacklist checking was done by SpamAssassin only, and the whitelist/blacklist only affected the SpamAssassin filter.

In version 3, there are additional whitelist/blacklist filters. They can be used to bypass every filter, not only SpamAssassin. In turn, we no longer make the whitelist/blacklist configuration items of the SpamAssassin filter available in the user interface.

The SpamAssassin whitelist stored in the whitelist_from lines of the file local.cf in the sa\ruleset subdirectory of your installation (blacklist: blacklist_from lines). You can still view and modify this file with a text editor.

If you want the whitelist/blacklist to work for all filters and not just for SpamAssassin, use the new whitelist/blacklist filters.

You can copy/paste the mail addresses from the SpamAssassin settings, and delete the SpamAssassin whitelist/blacklist settings afterwards.
