Hi,

I would like to forward all SPAM mails to a specific E-mail address (garbage@dom.uk)

Where do i define this E-mail address after making the SpamAssassion Filter.

In the SpamAssassion Filter i choose "Reject & Redirect" when defining SPAM Mail policy Options, but i can not figure out where to set the redirect email address?

Thanks and best regards  
MI

This setting can be found in the SMTP proxy setup dialog. It applies to all filters using the reject/redirect filtering policy.
