Hi,

How do i add a new filter (PDFInfo from sa rules emporium) in a windows NoSpamToday?
I know that i have to place tht pdfinfo.cf file in the rulesetdirectory and edit the init.pre with

```
# PDFInfo - check PDF in emails
```

```
#
```

```
loadplugin Mail::SpamAssassin::Plugin::PDFInfo
```

But where do i put the pdfinfo.pm ??

Kind regards,

Arthur Frank

Additional .pms have to be compiled into the spamassassin.exe which is part of the NoSpamToday! distribution. Mail::SpamAssassin::Plugin::PDFInfo will be integrated in one of the next releases.
