Is there any way to configure No Spam Today so that it doesn't send a reply to all Spam messages?

There seems to be a quite common misunderstanding. NoSpamToday! sends its' rejection not in a separate reply message but as a status code within the SMTP session. It is the reply to the DATA command: In the accept case it is "250 message queued for delivery" (or something similar), in the reject case it is "550 [your rejection message]". The mail delivery failure notice is not created by your mail server, but by the sending mail server. The mail delivery failure notice typically does not reach spammers at all, as a spammer won't give his real address, but it can be useful to inform legitimate users that their message was tagged as spam and might not be read.

I was confused by this as well. You may wish to clarify the functionality of this as you did above in documentation or even the admin wizzard itself.
