It would be great if I could see why a message is deemed SPAM when the policy is to delete the message and not deliver it.

Possible?

I got a bunch of false positives today, and have know way of knowing why- RBL issue? Need to back off aggressive setting? Need to lower scoring weight of some SpamAssasin criteria?

I'm in the dark.

Thanks.

Back down a little, to Reject & Deliver. Let your mail server to the work, add a filtering rule that moves spam (all mails with the spam subject tag) to a quarantine folder. This way you are able to view the SpamAssassin reports.
