I just turned on my administrative reporting and was informed that

Mail Addresses Used/Licensed: 50/50

Later in the email it shows the List of mail addresses in use:

there are a bunch of invalid email addresses in there, and I should only actually be using about 32 of my 50 licenses.

How do I resolve this issue?

Thank you.

I am not using Exchange 2003, so I would have to use the second scenario, which would be to type in all of the 'valid' addresses into nospam today.

This does not really seem to be a 'good' choice as users come and go often and this would be a lot of overhead.

Could you please perhaps add to a wishlist request:
That nospam today checks that the mail address is good

Or perhaps this is being worked on now.

Regards.
