We are happy to announce the release of version 2.0.5.1 on Mar 23rd, 2005.

For a complete list of changes, please find the revision history here:

<http://www.byteplant.com/support/nospamtoday/server/changes.html>

The new version can be downloaded here:

<http://www.nospamtoday.com/download/server/>

Please help us to improve NoSpamToday!, any comment or suggestion is highly appreciated.

New version works great. I appreciate the ability to switch log files based on age.... that helps a lot.

Just upgraded to the latest version from 2.0.3.2.

When I ran "checked for updates", I got the error: "Check for updates operation failed (connect failed (Address not available)). How do I fix that?"

Also, how does the SpamAssassin Bayes DataBase work? How often should I expire the tokens? I noticed that the SpamAssassin is having a real performance problem now. It takes up high CPU and some times it takes more than two minutes to filter a small message. This started to happen before the upgrade so it might not have any thing to do with the upgrade. Is there any way to improved the performance?

Thanks.

Probably the update check never worked, earlier versions did not report errors of the update check.

To fix this, see if you firewall maybe blocks this connection, NoSpamToday! tries to connect to www.byteplant.com, port 80. The new version supports using an HTTP proxy, you can configure a proxy in the global settings wizard (Files->Global Settings).

Daily expiry is about right, use the Windows task scheduler to do this automatically. There is more on this topic in the maintenance chapter of the manual (which was recently updated).

The Bayes DB consists of two files, one containing tokens (words), and the other message-IDs of messages already learned. The latter file never shrinks, it grows and grows. This is a SpamAssassin bug (bug#2975) which might get fixed in the next release.

In the meantime, if you find that your bayes_seen file is very large (>20MByte), you should delete your database, and install a fresh pretrained database as shipped with the NoSpamToday! installer.
