Guys,

thanks for the v2 update of nst.

I installed v2 on top of the earlier v 1.5...

when i view the log file there seems to be an error message re the bayes filter

Bayes: bayes db version 2 is not able to be used, aborting! at  
/PerlApp/Mail/SpamAssassin/BayesStore/DBM.pm line 160.

What's wrong?

regards

If you see this message while updating a version 2 Bayes DB, please ignore this message, it is misleading. It is a 'feature' of SpamAssassin, and we were unable to get rid of it. Everything is fine.

If you see this message in the log while NoSpamToday! is running, you did not upgrade the Bayes DB upon installation. You can do it by hand. Execute the following steps:

- open a command line window, and cd to the installation directory
- execute the following command:  
sa\sa-learn -c sa\ruleset --sync
- Wait a few minutes, and ignore any error messages (see above).

Might this be related to the version of perl being used as noted in the SA docs?

<http://spamassassin.apache.org/full/3.0.x/dist/UPGRADE>

No. It is SpamAssassin's way to tell us that it has found a version 2 database, and that it should be updated. Unfortunately it is also being printed when you are in fact updating the database, in this case you can ignore it.

To summarize:

Upgraders from version 1 (SpamAssassin 2.64) should select the "upgrade Bayes DB" task during setup, or move the database away.

Note that the database upgrade takes a few minutes.
