I have a problem with No Spam Today! Release 1.2.5.2 Unlimited Recipient connections and I cannot understand why.

Sometimes , it works quickly and well.Often not.

The server is in Network Load Balancing with another twin server on the TCP port 25 (smtp).

forward them to an antivirus server

Could you help me ?

Thanks a lot

Traffic Limiting sometimes help, for example if you are being flooded by non-delivery reports. The topic is covered in the user manual of version 2.

There is also a document that helps v1 users to set this up:

<http://www.byteplant.com/support/nospamtoday/howtohandlenondelivery.html> (a link to this document is also on the FAQ page).

V1 users should also check that the DNS server setting is correct. Make sure these servers are in fact DNS servers. It is a common mistake to enter RBL servers here.
