I have 2 proxies setup so that I can handle 2 different domains separately. The problem I am having is I can't specify different SPAM scores or SPAM subject tag for the different proxies... they share these settings?!?

I thought the point of having multiple proxies is so you can set up different filters/settings for different addresses/domains?

Adam

You can have different settings, but you have to provide a different ruleset directory where the settings for the second filter go (a simple file system copy of the sa\ruleset directory will do).

Once you have added a second SpamAssassin filter, you can enter the path to the ruleset directory in the configuration dialog. For more details, look at the section "Multiple SpamAssassin Filters" in the manual.
