I tried installing NO SPAM TODAY SMTP PROXY on my web server which has IMAIL running. I configured all settings (on port 25, outgoing netpiper.com port 25) and when i try to start the service it says "COULD NOT START".

But actually the service is started at the backend. Now when I try sending emails to this domain (www.netpiper.com) from my local machine using outlook, I am not able to connect. It is rejecting the SMTP. What should I do?

can anyone tell me the step by step process of how I can install NO SPAM TODAY on my machine which has IMAIL SERVER running. Your help will be highly appreciated.

NOTE: I have installed No Spam Today! SMTP Proxy 2.0.3.2

thanks in advance

You can't have two processes (Iemail and NoSpamToday!) listening on the same port ("" includes the interface of netpiper.com). One of them needs to use either another IP address, or another port.

If you haven't already, please read the installation chapter of the manual, there are general step-by-step setup instructions.

thanks a lot for your reply. I have few concerns after installing the SPAM TODAY! using different IP address and same port (25).

I have given the IP as follows:

216.122.149.236:25 --> 216.122.144.122:25. Here 216.122.149.236:25 is an IP that I have not used for any web site or email domain. 216.122.144.122 is my main machine IP. Also, I have multiple email domains on this same machine - some uses static IPs and some uses Virtual IPs (IMAIL SERVER). Will SPAM TODAY! scan all emails coming to all this domains? After starting the service, I am still getting spam emails without marking them as SPAM, which is the subject tag I gave in the settings...

Please help. Also tell me if this software will expire after some time?

If you do not want to change the MX records of all these domains, it will probably be easiest to have NoSpamToday! listen on port 25, and Imail e.g. on port 26.

NoSpamToday! will scan all domains. To check if NoSpamToday! has "seen" a message, check the received headers of the mails you get. If there is no received line from NoSpamToday!, it was bypassed in your setup.

The trial version will stop checking after 30 days. The commercial and freeware versions never expire.
