We just purchased STMP Proxy with a 25 emails license. One question: shall I add the desired emails in the "Address Patterns to enable filter" field in the spamassasin configuration??

thnx.

If your mail server does not accept any other address, there is no need to.

If your mail server accepts other addresses, it is probably better to enter the addresses in the open relay protection setting of the SMTP port.

Read this document, if you are an MS Exchange user:

<http://www.byteplant.com/support/nospamtoday/howtorejectexchange.html>

Let me explain myself better. Well first we're using Visnetic MailServer, not Exchange. The mailserv features several subdomains. I'm using NoSpamtoday 25 recipients to filter spam on only one of the subdomains (the staff addresses) and not on the other email addresses (email addresses we would give for free use to certain individuals). My question was if to enable spam filtering on only the staff email addresses I needed to add those to the "address patterns to enable filter " field

thnx.
