Subject: reject/delete

I've set my SpamAssassin rule to mark the subject as SPAM and "accept and deliver" at a score above 6.0. Another rule in a second directory will reject and redirect at 8.0 or above. I set each rule (in the wizard) to "reject and delete" at a score of 11.0. But still all spams above 8.0 are getting redirected. I expected not to see any with scores above 11.0. Any ideas? I am using the latest NST.

The first filter already adds its X-Spam-Status headers to the mail, and wraps spam messages into a report. If I remember correctly, SpamAssassin does not scan mails if it finds a SpamAssassin report.

Try to setup a filtering rule in your mail server instead. Lotus Domino or MS Exchange both can scan the X-Spam-Status header of a mail, read the spam score, and redirect or delete mails depending on the score.

Try changing the order of the rules.

"Another rule in a second directory will reject and redirect at 8.0 or above."
