Is there a way to create an external filter to delay a message being sent that is over a certain size. For example:

If a message is over 2 megs in size move it to a holding directory. These messages would queue in the hold directory until 10pm and then would be released.

Thanks,
Lando

Something like this is not impossible, but difficult to do with an external filter.

You would need store and forward functionality for this, while NST is a transparent proxy.

NoSpamToday! tells the sender immediately whether a mail is accepted or not, if you want to delay checking this would be impossible.
