
Subject: MIME violation - but why?

Hello

I have one customer that can't send mails to my server as they are blocked by NST (2.0.51) because of a MIME error (Attachment Filter: Message violates MIME standards: MIME syntax violation).

I tried different thing with the customer and we stripped down the mail to nearly nothing but it seems that the error lies in the header information.

Here is the mail (no text in it):

220 cyberdog.ch MailSite ESMTP Receiver Version 5.3.6.0 Ready

EHLO mail03.agrinet.ch

250-cyberdog.ch

250-SIZE 0

After fixing the missing space characters (probably caused by copying the text in and out from a forum post), your message snippet does not have any syntax violations (tested with NoSpamToday!'s MIME parser).

Please use the mail storage filter to get a verbatim copy of the mail in question, and send it zipped to nstsupport@byteplant.com. Posting it to the forum would break it again and is of little interest to other forum users anyway.
