Subject: Forwarding stored Mails
Posted by schubo on Tue, 21 Jun 2005 10:26:32 GMT

Hi,

im looking for a tool (or a little help)
whith wich i can take the stored mails (.msg-ASCII-Files) and feed them manually into our smtp-server.

All mails are stored here, when they come in, then they are filtered and passed on to the mail-server.
Sometimes i need an old one that was filtered. So i copy/pasted it to a blank email in outlook and sent it.
It would be nicer to send the mail "in original" by bypassing the filter and sending it to the original-recipient using some kind of tool that takes the .msg-file and stuffs it back in the smtp engine.

Any ideas ?

Some tool like you mentioned will be probably included in one of the upcoming versions. In the meantime, we have a command line program for this. Please contact us at nstsupport@byteplant.com to receive it per mail.
