I noticed something strange: normally when a mail passes NST there are a few lines added to the mail header. Something like this:

X-Spam-Checker-Version: SpamAssassin 3.0.4 (2005-06-05) on cyberdog

X-Spam-Level:

X-Spam-Status: No, score=0.2 required=5.8 tests=BAYES_50 autolearn=no
version=3.0.4

In the past time (since a few month) I get a lot more spam. So I checked the header and there is no stamp from NST in it. Why not? Should not every mail get an info added when passing NST?

This can happen for several reasons:

- The message might be larger than the skip size (256k by default)
 - The message's recipient address is not licensed
 - Make sure you see NST's "Received" header somewhere at the top of the message. If it is missing, the mail is not passed through NST at all (maybe received on a secondary server?)
-
-

No, all are smaller than the skip size.

> - The message's recipient address is not licensed

No, unlimited licence.

> - Make sure you seee NST's "Received" header somewhere at the top of the message.

> If it is missing, the mail is not passed through NST at all (maybe received on a secondary server?)

The header contain a NST received information (...with No Spam Today! Service V2.3.1.2 Unlimited Recipients...) but no tags from SpamAssassin.

I found the problem when I controlled the logfile. The spam check by SpamAssassin has run in a timeout (not on every mail, but on most of it). Then I setup the timeout from 30 to 45 seconds and now it works again.
