I am using Workgroupmail server and NPT on one machine. Services for NPT are not starting. I understand that both cannot listen on port 25 together , and I am sure this is why NPT wont start running, but I dont know how to change the listening port on my Workgroupmail program to like 26. Does anyone have help for this?

Thanks in advance.

answered my question, thanks. Settings, under advanced tab, box shows client port...that is what Workgroupmail uses to listen on. If you change it to 26 and in Spam assassin change to output on 26 all will be fine.
