Today I had some blatant porn mail make it through our system. I have my threshold set to 4 and some of those alone should have tripped that. What could be causing this? I am using the default rules that come with the program.

To find out the score and which rules triggered, look at the X-Spam header fields of the offending mail.

If you are using version 2.3.2.2, update to the latest version, it might be that the offending mails were UTF-8 encoded, and you suffer from a bug we fixed last week.
