Attempt to delete pop3 proxy generates the following error:

Operation GetCurrentObject not available (D:\source\FW\src\FWObjectCursor.cpp: 319)

Restarts and updates have not fixed the issue.

If the problem persists, open the config file with a text editor, and delete all sections that involve the POP3 proxy (if you already deleted the filters, there will be only one).

We will address this problem in the next update.

Thanks for reporting this!
