I cant start NoSpamToday. At first, when the service starts it shows:

Service restart failed.

OK

Then:

Service is not running. Open relay test cannot be performed.

I believe the last error is because the service was not able to start in the first place.

The logs show this:

Winsock 2

(Bind) Address alerady in use

Shutting down.

Any ideas?

Probably the incoming server address is still in use by your mail server. Reconfigure your mail server to listen on a different IP/Port, or use a different IP/port for NoSpamToday!, and change your Firewall settings.

All of this is lined out in more detail in NoSpamToday!'s manual.
