Subject: Scanner - oops

Wondered why when I tried to do some scanning today that the email's weren't arriving from our Olivetti MF22 multipurpose printer.

Then noticed they were getting flagged as spam :) And in some cases, the delay filter was blocking them as well.

A simple re-config of the printer to send direct to Exchange on port 26 worked a treat but for some reason it took us a while to suspect a spam filter preventing a network scanner from working

Cheers, Rob.
