Hi,

I'm currently testing SMTP proxy and now for second time in several days it has stuck. No mail is passing through, NoSpamToday.exe process consumes nearly 100% of CPU, but admin interface is working. External antivirus is NOD32. It also looks that last message that may cause this problem is not logged. When I select "Apply Settings (Restart Service)" from admin console, it works and then it works just fine.

so I cannot do any action (automatically restart the service).

Petr

This sounds very strange. Please turn on detailed logging and send us your nospamtoday.cf and nospamtoday.log files for analysis if this should happen again.
