I need a few days to test the SMTP Proxy, which has been great so far. I have about 50 physical users on my system. What exactly will happen once my license counter reaches 10. Will SMTP traffic stop or just be forwarded to my mail server without being scanned?

Thanks for your help.

Please make sure you are using the trial version of NoSpamToday! (select "Free Trial & Registered Setup" on <http://www.nospamtoday.com/download/server>).

It can also be installed on top of an existing freeware installation, all configuration settings and the Bayes database will be preserved.

The trial version is fully functional for an unlimited number of recipient addresses, but will stop scanning mail 30 days after installation (mail will of course be delivered, but it is no longer scanned). After this period of time you have to purchase a license key if you want to continue using NoSpamToday!.
