I've setup the Mail Storage filter and configured it to put mail in E:\MailStorage but the email ends up in C:\Windows\Temp. If I go into the filter to check the location, it's still there. If I close and restart the admin, the filter now says to the Storage Directory is my personal %temp% location. (C:\DOCUME~1\earl\LOCALS~1\TEMP\). It doesn't appear that this value is getting saved.

Installation location is E:\NoSpamToday

Can anybody give me some ideas to fix this? Is it a known bug?

Looking at the NoSpamToday.cf file, it looks like the information is not getting saved to the config file. I see an entry for [...\Filters\CacheConfig] but the only item under that is the AddressListSameAsPrevious="true" setting.

I just checked, and it seems that the directory select dialog is broken. Typing the directory name in the field to the left works without problem.

Thank you for bringing this problem to our attention. It will be fixed in one of the next releases.

I tried it on another machine and it worked. Thanks.
