Hi there,

maybe this is very stupid question, but I noticed a lot of email coming to NST, which has my domain @buzalka.com but are not valid address.

Thanks

V.

is it the IP address that is invalid or the mail address (i.e. they are sending to an invalid mail user in your domain..)?

If the it is an invalid IP address, sometimes it is just easier to raise the scores assigned by Spamassassin for spammers that are sending through known relays, known spammers, etc. In otherwords double the scores assigned.

Please note that NoSpamToday! is a transparent SMTP proxy and thus accepts a recipient address only if your mail server also accepts it. This means there are two options to resolve this issue:

1. Configure your mail server to accept only valid addresses and to reject all other addresses
or

2. Enter the valid addresses into the Open Relay Protection list in the SMTP Proxy wizard of the NoSpamToday! admin wizard.
