In the Admin program, on the Maintenance tab, the lower section has a "Size [kb]" field indicating the size of the file containing the bayes tokens. The field contains the number of bytes in the file, whereas the field description indicates this is the number of kilobytes.

For example,

My field says 11812864 - which if were kilobytes, would mean the file is 11 gigabytes in size. However the actual file is only 11 megabytes in size.
