We use the Reject/Redirect option in the SpamAssassion filter to send all mail above rated above 4.8 but below 12 to a holding mailbox that is manually inspected, to be sure that no legitimate mail is rejected.

The problem is that the sender receives a failure e-mail stating that the recipient could not be reached. I modified the message in the SMTP proxy to indicate that their 'mail was identified as spam and has been delayed', but senders aren't reading this, and are just resending. This affects the auto whitelist.

I want to be able to Accept/Redirect these messages, so that the sender doesn't get any failure message. Is this possible?

Yes, you can change the Spam Policy to "Accept/Redirect" if you
check the "Advanced Configuration" checkbox on the first page
of the SpamAssassin Filter wizard.
