Hello

Since NST version 2.3.5.1 I got the following errors when I try to learn spam:

"config: could not find site rules directory" and

"config: could not find sys rules directory"

The same errors appear when I try to "spamassassin --lint".

Regards,

Dave

Problem still exists... Where are these settings saved?

Looks like a path problem finden the rules dir.

IMHO you should:

1.) Set the path to the bayes dir absolut not relative.

in local.cf

```
bayes path e:\nst\db\bayes
```

2.) Set the parameter for the rules dir in the batch jobs absolut.

Example SPAM-Batch:

```
e:
```

```
cd\
```

```
cd "nst\sa"
```

```
"e:\nst\sa\sa-learn" -c "e:\nst\sa\ruleset" --showdots --spam "c:\spam\*.*"
```

The quotation marks are important if there are blanks in pathnames.
