So far I am really impressed with NST for Servers. However I have one small problem I need to solve before I purchase the software, and believe me I really want to...

Whatever I try, the NST service will not start automatically. I always have to start it manually from the Windows services management tool. I have looked for error messages in the log, but a log file is not even generated until the service is started. Once I have started the service manually, everything works like a charm.

Any help or suggestions will be very gratefully received,  
Best regards,  
Alastair

Can you restart the NST service via "File->ApplySettings" in the NST Admin Wizard?

Hello, thanks for your prompt response.

Yes, the service restarts correctly when I select File -> Apply Settings.

Best regards,  
Alastair

Please check the startup type of the NST service (should be "Automatic").  
Does the Windows event log contain any correlated entries?

Hmmm, I've found an entry in the windows event log which reads:

Event Type: Error

Event Source: Service Control Manager

Event Category: None

Event ID: 7000

Date: 22/09/2006

Time: 23:54:33

User: N/A

Computer: SERVER1

Description:

The No Spam Today! Service service failed to start due to the following error:  
Waiting for a process to open the other end of the pipe.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Thanks again for your help!

Alastair
