I have a process running on what looks like a user defined port that is not in the SMTP setup. I am trying to decide if this is a feature no longer supported, or how to use it.

If I use a TTY connection I am greeted with:

NoSpamToday! Monitoring Service Ready.

If it is no longer used I would like to know how to kill it. If it is used I of course would like to know how to use it.

This is the NoSpamToday! Monitoring Interface.

It is needed to display real-time status information in the NST Admin Wizard, so you should not disable it.

Is it possible to change the ports?

Yes, the monitoring port can be changed in the nospamtoday.cf file:

```
[ServerSessionManager\Ports\MonitoringPort]  
IncomingPort=""
```
