Hi,

3.5 BP\_STOCK\_SPAM\_1      Appears to be stock spam

I'm trying to find this rule, I can't remember adding a 'stock' rule to the ruleset folder, however I did do an upgrade to NST prior to finding this rule come up in 'false-spam' emails.

I have another stocks rule that is in effect (SARE) - but it doesn't show up in the emails when this rule shows up.

And I've looked in numerous recently downloaded custom rules, but search results show nothing.

I've tried googling this rule, comes up with nothing...

I need to find this rule and either remove it, or tone down the score - I have my spam score set to 4.8

In each email this rule scores in, it's the highest rule in the email, as every other score is around 1 or less.

is there a way to find this rule without sifting through everything?

I've already been through everything that was created within a span of a month (around the same time I started to get this problem).

This rule and its score is defined in the nospamtoday\_local.cf file  
in the sa\ruleset subfolder of the NoSpamToday! installation folder.
