
Subject: Complete SA log

I have just setup a trial and have included all three options on the logging under the Global Settings.

However, the spam scores seem to be too low and a lot of spam continues to come through. At least for tuning purposes, I would like to see *in the log* the details of every rule that is evaluated and its resulting score. This way I can see what values need to be changed in which rules. For instance, I want to make an RBL failure an automatic delete.

How can I turn on this detailed logging?

Thanks.

To enable detailed SpamAssassin logging, please turn on "Log Filter Error Output" in NoSpamToday!'s Global Settings and change the Commandline setting in the SpamAssassin Filter Wizard to

```
sa\spamassassin.exe %FLAGS% -x -D -c "%CONFIGPATH%" -e 255
```

This setting appears only if you activate "Advanced configuration" on the first page of the SpamAssassin wizard.

For information on rules scores, please see the 50_scores.cf file in the sa\ruleset subfolder of the NoSpamToday! installation folder.

Make sure that all changes to the SpamAssassin configuration you want to make are done only in the local.cf file.
