I'm testing out the nospamtoday 3.0 version, there are alot improvements compared to the 2.x but I found a little bug. Max. Log File Size must be entered in bytes and not in kBytes as displayed in the Global settings wizard.

screen:

Thank you for reporting this. Watch out for the fix in the next version.

Hi there,

I've just installed new version of nospamtoday (NoSpamToday V3.0.4.2) and I'm wondering if I should turn my logging file back to KByte in place of bytes in nospamtoday V3.0.3.6 ?

Thanks in advance.

Star-pak

That particular problem has been fixed some time ago, in version 3.0.2.3 (one of the minor improvements and fixes).

Since then, the log file size is displayed and entered as advertised, in kByte.
