I Have created a blacklist with the list of email to block but I continue to receive the mail from the blacklist senders.

the Log indicated:

(Blacklist) Filter result accept/deliver

It seems that my blacklist is not active. ?

So there can be many reasons why a particular mail might not have been filtered.

The blacklist filters sender addresses, and can be disabled depending on the recipient address.

It might be best if you send your configuration file (noSPAMtoday.cf) and the interesting part of your log file (noSPAMtoday.log) by mail to nstsupport@byteplant.com.
