
Subject: Blacklist/Whitelist gone from Spamassassin GUI config

Hi NST team.

I must say that I really like NST 3 ,an excellent step forward from v2 which we were using without any problems at all prior to v3.

One thing I am concerned with though is your decision to remove the configuration of spamassassin blacklist/whitelists from the GUI. This was a very convenient way to quickly add or remove items from the spamassassin filter, now we have to dig for and modify a file each time we wish to make a change.

Would you consider re-including the spamassassin blacklist/whitelist configuration in the GUI in a future update?
