I have just updated to the new available version 3.0.4.1. Since that all mail exceed the spamassassin mail size limit.

-> (SpamAssassin) Filter result is accept/deliver (skip size exceeded)

```
[ServerSessionManager\Ports\POP3Port\Filters\SpamAssassinConfig]
AddressListSameAsPrevious="true"
CommandLineTimeout="30"
DropThreshold="100"
```

How can this be fixed?

I have the exact same problem. I noticed it after upgrading my 3rd customers server.

I have promptly stopped updating anymore servers until this is fixed.

I will send the detailed log very soon.

There was an issue with V3.0.4.1 where in some configurations the SpamAssassin filter's skip size feature was not working as expected. Please upgrade to V3.0.4.2.
