Hi,  
my NoSPAM Today Server die always make this DNSBL Query:

URIBL\_RHS\_ABUSE      Contains an URI listed in abuse.rfc-ignorant.org

How can I disable/remove this function. I have never enabled that NoSpamToday should use this blacklist in the DNSBL Filter. I tried to disable this function but i can't find the option.

I have a enormus high rate of false positive Mails. The DNSBL Filter did only use this two blocklists: sbl-xbl.spamhaus.org, bl.spamcop.net.

But NoSpam queries always rfc-ignorant.org too.... How can I fix this Error ?

The line you see is created by the SpamAssassin filter. You can disable this particular rule in SpamAssassin for example by adding this line to the sa\ruleset\local.cf file:

```
score URIBL_RHS_ABUSE 0
```

The DNSBL filter does not modify the message, in particular it does not add a SpamAssassin report like the SpamAssassin filter does.

But I very much doubt that this rule alone is causing lots of false positives. Maybe it is some other simple problem, like the SpamAssassin "required score" set too low.

Please contact us by mail to [nstsupport@byteplant.com](mailto:nstsupport@byteplant.com), and add your configuration files (nospamtoday.cf and sa\ruleset\local.cf), an example message, and perhaps a snippet of the log file (nospamtoday.log).
