Just read the release notes... this bit worried me:

SpamAssassin 3.2.4 engine with DCC (Windows NT no longer supported)

Does that mean that we are now unable to upgrade?

It's not the complete end of the world as we're in the middle of upgrading to Windows 2003 server and AD.

Cheers, Rob.

NoSpamToday itself still supports Windows NT, but as far as we know the SpamAssassin build included in version 3.1.1.2 no longer runs on NT.

Is it possible for NT users to not install the new spamassassin engine when updating to the newer NST? Or re-install it?

Yes, this is possible. You can backup the "sa" subfolder, install the latest NoSpamToday release and after that restore the "sa" subfolder.
