Last night our NoSpamToday service stopped. After examining the logs, event logs the only thing odd is this event.

HHCTRL Information None 1903 N/A PALCICA The description for Event ID (1903) in Source (HHCTRL) cannot be found. The local computer may not have the necessary registry information or message DLL files to display messages from a remote computer. You may be able to use the /AUXSOURCE= flag to retrieve this description; see Help and Support for details. The following information is part of the event: <http://go.microsoft.com/fwlink?LinkID=45839>.

This event started after we installed NoSpamToday. It's repeatedly logged every cca. 10 sec. Is it possible that this caused NoSpamToday service to stop?

Check NoSpamToday!'s log file: noSPAMtoday.log in the installation directory.

Very likely it is just a port conflict, when another service has already grabbed the SMTP listening port. In this case you will find a message like "address in use" in the log.

Please check if there were any recent configuration changes in your mail server software.
