I'm a newbie to NoSpamToday!. I'm trying to figure out how to create and setup a Mail Storage Filter. Can someone point me to the right place or show procedurally how do it. Thanks for your help.

In the NoSpamToday Admin Wizard, select the "Configuration Tab" and choose "Add Mail Storage" from the "Filter Setup" menu. Configure the "Storage Directory" for the mails and set the storage limits (No. of mails, total storage size, No. of days a mail should be kept). After the Mail Storage Wizard has finished, you can decide which mails to store by changing the mail storage filter's position in the filter chain. Moving it up to position #1 by selecting the filter and right-clicking (->Move up) means that all mails will be archived. Moving the filter downwards the chain means that it will archive only mails that have not been filtered out at this point.
