I have installed a trial version of 3.1.4.2. During the install everything went fine. The service is running and I am filtering e-mail with a 2 IP address setup. This is installed on a Windows 2003 SBS Sp2 server.

However, when I select the Configuration tab and choose the Spam Assassin maintenance wizard I receive an error on about the second screen of the wizard. The error says Can not open file C:\Program Files\No Spam Today!\local.cf mode=read (No such file or directory) Unable to read the configuration file.

I looked and the error is correct. There is no local.cf file on that path. There is a local.cf file in the C:\Program Files\No Spam Today!\sa\ruleset path. However, that file appears to be generated by the wizard but I am unsure of what content it should contain. Does not look like it contains the choices I made during configuration.

Below is data from the NoSpamToday.cf file

```
[ServerSessionManager\Ports\SMTPPort\Filters\SpamAssassinConfig]
```

```
AddressListSameAsPrevious="true"
```

```
SpamAssassinRulesetPath="C:\Program Files\No Spam Today!\\"
```

Where is the local.cf file supposed to be located? What is happening to move the file or change the path?

Ron Gooding

This seems to happen occasionally with NoSpamToday version 2 to version 3 upgrades. Activate "Advanced Settings" in the SpamAssassin Filter Wizard and re-enter "sa\ruleset\" as Configuration Path on the third page. Close the wizard and restart the NoSpamToday service.

made change as directed. I still see no configuration files or ruleset. Do I need to create a directory like C:\Program Files\CleanMail\sa\ruleset? Do I need to download again from somewhere?

The problem starts when upgrades to cleanmail.

Some of the CleanMail installation files have been moved to the user's documents and settings directory.
Windows 6 and later does not like configuration files in the "program files" directory.
