Hello,

evertime i close the admin panel, i'm getting a "configuration change detected" message from NST admin panel.

Before 3.2.2.2 this mesaage appeared only if there was some configuration change made, now it's displayed always.

That's a bug of version 3.2.2.2. Usually you won't notice this bug if you do not have "show tips at startup" enabled.

The fix for this is already available on our download servers (version 3.2.2.3).

As this is the only fix, there is no need to upgrade unless you want to. The "Check for Updates" function of NoSpamToday! will not advertise the new version.
