I have multiple workstations. I use Outlook - which allows you to say "delete at server after x days". These days I get over 2000 emails per day so I set "delete after 1 day".

After trying No-Spam for 2 days - it does not appear to be deleting. After 2 days I'm up to 5000 email and it fast outstripping ability of No-Spam - i.e. I can't wait 8 hours for it to process them. Is there some setting?

Outlook forgets what messages it has seen whenever the account settings change. Could it be that you enabled/disabled NoSpamToday! for the account in question?

Set the maximum spam size setting in the configuration wizard to 1 byte, this effectively allows you to disable NoSpamToday! without modifying Outlook's account settings. The processing will be as fast as you can download your mail.

Yes.
> Could it be that you enabled/disabled NoSpamToday! for the account in question?
No.

And it gets worse. My pop server is a domain hosting company called Verio - and I'm limited to

200MB (that's mega bytes). On this site I can see Unix directories (via a web app) to delete files when they become large... for some reason NoSpamToday seemed (I'm not necessarily blaming NoSpam) caused a Trash file to become 160MB (after 3 days) and I had to uninstall. It appears as if NoSpam caused a extra mail directory to be created? with Inbox, Trash and Trash became a 160MB file that I had to delete to get back into compliance. When I deleted this extra mail directoy and uninstalled NoSpam everthing went back to normal.

I don't have info/tools to figure out what's happening - and after several hours on this I'm out of time.

It seems there is an Outlook quirk which needed a small workaround. This issue seemingly did only occur in certain Outlook/POP3 server combinations.

The latest version (1.0.5.2) fixes this. Please get it from the download page.
