After I registered No Spam Today for workstations 1.0.6.2

Outlook express does not work.

I can get my mail one time then I must uninstall and reinstall then it will work one more time then i have to do it again...under the trial version i never had any problems...

AHHHHHHH!

help!!!

Win xp pro

1g ram

3.0g cpu

sata 160g

high speed internet

Support responded to my email and told me about a FAQ that had this issue in it.

It works great now....

here is the FAQ and the issue was the port 110, changed it in nospamtoday and in outlook express to 111 and bingo!!!

The resolution given trouble may be lost outlook express. The utility uses modern and clear methods of restoring outlook express data. It can work with big invalid dbx files and can save restored info as files not larger 1GB, if larger as some dbx files. The program starts under all major versions of Windows OS.
