
Subject: Problem with statistics in 2.0.1.4

When I upgraded to 2.0.1.4 (and registered, if that matters), it seems to have screwed up the stats for the program. While not a big deal, it was interesting to check occasionally.

I typically receive about 10-15 spam emails a day, and a legit email every few days, so these stats are obviously very wrong.

Here are some screenshots..... how can I fix this?

You probably updated from version 1, and it seems there was a bug that caused a counter to underrun (a signed value of -1 corresponds to an unsigned value of 4 billion and something).

Open the file noSPAMtoday_Statistics.csv (in the installation directory), and fix the offending values with a text editor of your choice.

You can also open the file with MS Excel or similar.
